

AVIRAL YADAV

Gorakhpur, Uttar Pradesh

+91-7007934595 aviy2402@gmail.com LinkedIn Github Portfolio

EDUCATION

Vellore Institute of Technology

BTech - Computer Science and Engineering (Cyber Security and Digital Forensics) | CGPA - 8.01

Bhopal, Madhya Pradesh

2022 - 2026

TECHNICAL SKILLS

Languages: Python, C++, JAVA, SQL

Data Science & Machine Learning Scikit-learn, Pandas, NumPy, Matplotlib, PyTorch, Recommendation Systems, Data Preprocessing, Model Evaluation

MLOps, Databases & Data Tools: Power BI, Tableau, Model Deployment, REST APIs, CI/CD, Git, Github, MySQL, PostgreSQL, MongoDB

WORK EXPERIENCE

QuantAI [\[link\]](#)

Data Scientist Intern

May 2025 – August 2025

Auckland, New Zealand

- Built and deployed end-to-end ML-powered web applications using Python, Scikit-learn, and Streamlit, applying content-based filtering and cosine similarity algorithms to deliver real-time personalized recommendations integrated with third-party REST APIs.
- Performed exploratory data analysis and business intelligence reporting using Python (Pandas, NumPy, Matplotlib, Seaborn) and PostgreSQL, writing 10+ advanced SQL queries with CTEs and window functions to surface revenue trends, customer segmentation, and behavioral insights across 3,900+ records.
- Developed full-stack data applications using Flask, BeautifulSoup, and React (TypeScript + Vite), engineering anti-bot evasion mechanisms and deploying decoupled architectures on cloud platforms (Render, Vercel) with interactive Power BI dashboards for business decision-making.

PROJECTS

Scrapeazon — Amazon Product Scraping Platform [\[link\]](#)

- Built a full-stack web scraping platform (Python Flask + BeautifulSoup + React TypeScript) that extracts 100+ structured product records per search across 20 paginated pages with 9 data attributes per listing.
- Engineered anti-bot evasion with 5 randomized User-Agents, exponential backoff, and 5-retry logic; deployed decoupled architecture on Render (API) and Vercel (frontend) with end-to-end query-to-result flow under 10 seconds.

Customer Behavior Analysis Project [\[link\]](#)

- Conducted end-to-end EDA on 3,900 customer records across 18 features using Python (Pandas, Matplotlib, Seaborn) and 10 business-focused PostgreSQL queries with CTEs and window functions covering segmentation, discount impact, and revenue contribution by age group and subscription status.
- Delivered an interactive Power BI dashboard with KPI cards, revenue breakdowns, and demographic filters translating transactional data into actionable insights across 4 product categories and multiple customer segments.

Music Recommender System [\[link\]](#)

- Built a content-based music recommendation engine using Python (Scikit-learn, Pandas) on a 5,000-song dataset with NLP-driven feature vectorization on lyrics and metadata, generating a cosine similarity matrix to surface the top 5 similar tracks per query.
- Deployed an interactive Streamlit web app integrated with the Spotify API to dynamically fetch real-time album artwork for each recommendation, delivering a full end-to-end user experience from song selection to visual results in a single click.

CERTIFICATIONS

- Deloitte Data Analytics Job Simulation — Forage
- Introduction to Data Science — Infosys Springboard

SUMMARY

Computer Science undergraduate with hands-on experience in AI/ML and Data Science, specializing in building and deploying end-to-end machine learning applications across recommendation systems, data pipelines, and predictive analytics. Proficient in Python, Scikit-learn, and SQL, with practical exposure to the full ML lifecycle — from EDA and model training to REST API integration and cloud deployment. Passionate about transforming raw data into actionable business insights through statistical analysis and interactive dashboards.
