SKILLS

Programming Languages : Python, Java, SQL, HTML5, CSS3, JavaScript, React

Machine Learning : Scikit-learn, Pandas, NumPy, Matplotlib, Recommendation Systems, Data Preprocessing, Model Evaluation

Data Analytics & Visualization : Power BI, Tableau, Advanced Excel, DAX, Data Modeling

Tools : Microsoft Office Suite, Github, Git, AWS, Jupyter Notebook

PROJECTS

Business Intelligence Dashboard - Multi-Source Data Analytics – [PowerBI | DAX | Data Modelling | Excel]

- Developed a Power BI dashboard integrating multi-source data to deliver real-time insights for business decision-making
- Created interactive visualizations (KPIs, trends, heatmaps) for intuitive data analysis and reporting
- Applied data modeling and DAX to build calculated metrics and optimize performance tracking

Scrapeazon - E-commerce Data Extraction Platform – [Flask | Python | BeautifulSoup | REST API | Git]

- Engineered a Flask-based REST API to automate Amazon product data extraction, enabling real-time market research, competitor price monitoring, and inventory analysis without manual intervention
- Achieved **>95% data accuracy** by implementing sophisticated parsing logic to extract 7+ key attributes per product: name, price, rating, review count, availability, discount percentage, and Prime eligibility status
- Built scalable scraping architecture capable of **navigating 20+ pages and retrieving 100+ unique listings** per query with duplicate elimination, suitable for both small-scale queries and large-scale data collection tasks

Music Recommender System – [Machine Learning | Python | Scikit-learn | Streamlit | Spotify API]

- Developed a content-based music recommendation system using TF-IDF Vectorization and Cosine Similarity on a dataset of 5,000+ songs to generate relevant recommendations.
- Built and deployed an interactive Streamlit web application, enabling users to search from thousands of songs through a user-friendly interface.

EXPERIENCE

Quant AI Limited

May 2025 – Aug. 2025

Data Scientist Intern (Remote)

Auckland, NZ

- Designed and developed backend services and automated data pipelines using Python and Flask, handling large-scale structured and unstructured datasets.
- Built and deployed web scraping solutions to collect and preprocess data from multiple sources, improving data availability for analytics
- Engineered automated ETL pipelines for real-time data collection and preprocessing, improving data availability for analytics use cases
- Collaborated with team using Git for version control and Agile sprints to deliver production-ready code
- Enabled data-driven decision making by preparing datasets suitable for visualization tools like Power BI/Tableau

EDUCATION

Vellore Institute of Technology, Bhopal

Aug. 2022 – June 2026

B Tech in Computer Science and Engineering (Cyber Security and Digital Forensics)

Bhopal, MP

- **Coursework:** Data Analytics, Database Management Systems (SQL), Business Intelligence & Data Visualization, Machine Learning, Data Structures and Algorithms
